Liquip appointed ANZ distributor for i-Meter Truck Tracking

Dear Customers,

Liquip are excited to announce that i-Meter has appointed Liquip as their exclusive Australia/New Zealand distributor for the i-Meter vehicle and truck tracking system.

The i-Meter is a system for tracking the vehicle and the stock movements on the vehicle. The i-Meter will report each delivery detail to HQ within 30 seconds of completion, giving you complete transparency and accuracy of all stock movements in real-time.

The i-Meter connects to your Liquip electronic register or combined register and level gauge CPU and instantly records and reports all tanker flow and product level activities .

With an i-Meter vehicle tracking system you can:

- Report each delivery detail to HQ within 30 seconds of completion.
- Capture inventory information as well as delivery data.
- Send a PDF copy of meter ticket information (Ticket Number, start/end time and of course the exact and quantity delivered).
- No waiting for drivers to return paperwork, deliveries can be invoiced straight away.
- Reports co-ordinates of each delivery and displays location on an interactive map, using Google Maps.
- Reports tanker route and delivery activity, product type, flow quantity, time and date in a secure web based dashboard in HQ.
- Low up front & monthly costs.
- Easy to install and can be set up in a couple of hours.
- No software installation is required as the i-Meter online dashboard is based on a cloud-hosted system.

Proud distributors of:

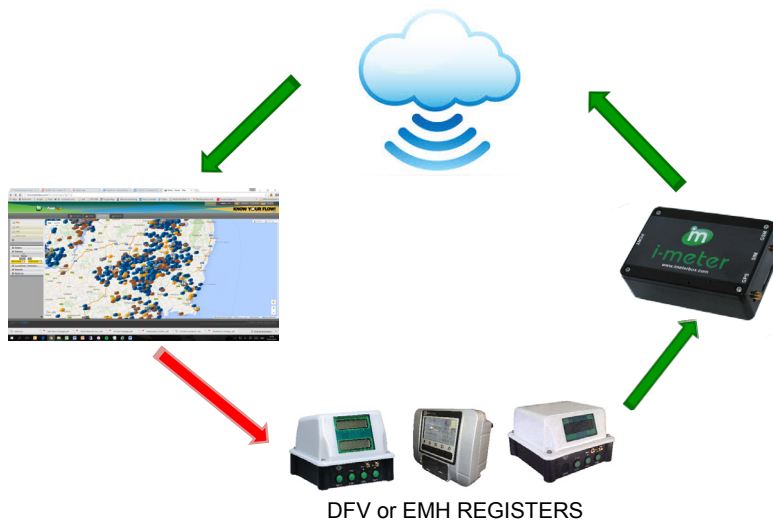

i-meter hardware

Example of PDF invoice can be accessed upon completion of delivery (NMI approved).
