Product Delivery Elbows (4" bodies) - New Price Release

Dear Valued Customers,

After listening to valuable market feedback across various geographic regions, Liquip has completed a cost review of its LTE product delivery elbows and are proud to release an updated version with new pricing across the range of 4" body LTE product delivery elbows, this will be effective from the 1st of October.

The LTE series product delivery elbows connect discharge hoses from a road tanker to a fill point on underground storage tanks fitted with Liquip tite fill adaptors or similar. Liquip's product delivery elbows allow for a quick and safe product transfer. They include spring loaded levers allowing the elbows to snap on securely to a side seal tite fill adaptor with minimal pressure.

The latest models of LTE elbows are now fitted with NBR seals which provide the same functionality as existing LTE's (unless otherwise specified).

Spare parts remain interchangeable between various models.

Key Features

- Spill free during discharge of tank trucks.
- Incorporated sightglass as standard for 360° view of product flow.
- Sealing on the bottom connection is via lip seal on the side of the LTA adaptor as the surface is rarely worn.
- Ergonomic design for added operator safety.
- Easy connection and disconnection, with its quick release design.
- Connection at the top is via standard camlock.
- Spring load levers that snap onto adaptors with minimal pressure.
- Can now be purchased with a locking ring which prevents the elbow from inadvertently dislodging during use - refer suffix "R" on item number or they can be purchased and fitted separately (P/N: **LTE4-RINGZ**).
